

Future Internet Research Activities and Testbed Experiences in Korea

S.-M. S. Kang (National Information Society Korea)

In Korea, Future Internet Research is just starting. Basic research work has been launched in this year. Korean government has large scale nation-wide research and development network. It has two roles. One is supporting high-speed and wide band network capability and the other is supporting at scale nation-wide test bed function for highly advanced technology, for example, USN(Ubiquitous Sensor Network), IP-USN, and u-Mobile technology.
