

Online-Seminar

### Satellite Formations

The seminar addresses example missions and crucial technologies in multi-satellite systems. Current first mega-constellations (like Starlink, OneWeb, Planet, Kuiper) raise new challenges in space technology and have mayor impact on “Internet of Things”. Future developments in satellite formations will be implemented in the next generation of these multi-satellite systems.

Thursday 12:15-13:45 (starting 15.4. with introduction meeting / survey on topics)
